Fruit Ninja User Guide :

- The game starts by a welcome window where the user has to click on (Start Game) button to start playing .
- By doing so , he will be navigated to the game frame where the game starts .
- Each player has initially 3 lives and score set to zero which are updated on the screen through the red and blue labels which represent the score and lives respectively .
- The player attempts to slice the fruits and increase his score by simply moving the mouse on the required fruit.
- By slicing special fruits represented in pomegranate and dragonfruit , the player adds 5 points to his score rather than 1 point which is added when he slices normal fruits .
- The player gets to level 2 when his score reaches 50 points and level 3 on reaching 100 points .
- In each level , the fruit's speed increases to make the game more challenging .
- The player loses the game by either losing all his lives or by slicing a fatal bomb and by this , he will be navigated to another frame where he can preview his score in each round and the best score he achieved while playing .
- To start a new round , the player has to click on (back) button and he will be navigated to the welcome frame again .
- Each new round resets the player's score to 0 and his lives to 3 .
